

Drafting an emerging picture

Name: Julian Gonzales

Community & UN SDG(s): Club Members & Owners, SDG 10: Reduced Inequalities, SDG 11: Sustainable cities and communities

Date: 10/22/2023

Instructions:

Using your researched information fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations	
Compare the left-hand column of the document "Technology configuration inventory" table with the right-hand column of the document "Community characteristics & orientation" table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?	
How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues' notes	I think the technology inventory covers the orientations quite well. Discussion boards, and events focus on the most important orientations which are meetings, access to expertise, and relationships. There is kind of a theme of public information going on as it mainly focuses on the public information the community provides
<input checked="" type="checkbox"/> Are you almost there? <input type="checkbox"/> Are there big gaps?	In my opinion I am pretty much there, there is some kinks here and there but I don't think it will be anything major with some talks with club owners
What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?	The range of skills can be very diverse but since the community has only one purpose, it should not cause any conflict or distractions
Achieving integration	
Look at all the pieces of your configuration	
What level of integration and interoperability has been achieved?	In terms of integration, some platforms have already done this quite well, such as facebook groups or discord
Where are there big gaps	The big gaps is that not many people use it for the way I want to use it as they are not meant for that so it becomes kind of lost and there becomes much more steps than needed to achieve what is wanted
Balancing the polarities (Current state)	

MVP 2: For MVP 2 I want to focus on making it easier for club owners as well as making it more of a digital habitat for each club. So members would be able join specific clubs in the web app instead of just looking at their information, they would be able to chat and share information, and the owners would have a bit more features such as a fee gather system or voting system.
